- 3 Falangoun Crossing
- 4 Birni Outpost
- 5 Tondiki Point
- 6 Madaoua Gate
- 7 Niger Border Post

The Real Scale

Data Point	Implication	Justification
 One border market recorded high export sales over a two-month period	One market, two months. Extrapolate across many border markets shows significant monthly volume	Market prices for basic food items have increased. Traders are moving more goods to meet demand.
 Multiple border markets engaged across several states	Only first phase. More states exist	New markets in other zones are becoming active again as local conditions improve.
 Agricultural storage facility in a rural village	Vast untapped agricultural value	Storage facilities are underused because farmers lack direct buyer connections. A digital platform can link them to neighbouring countries.
 An existing project office already collecting data	Existing physical presence to use	That office has basic infrastructure. Training can start there immediately.
 Land donated for a border market in another community	Future expansion node	The community is waiting. Timely action is important.
 Government digital communication centre at a border location	Government digital infrastructure exists	The centre has equipment and trained staff who are open to partnership.
 A common facility centre for processing agricultural products	Existing processing hub for women	Women currently sell raw products at low value. The platform can help them sell processed goods to higher-value markets.

POOR INFRASTRUCTURE

COMPLEX PROCESSES

POLICE CHECKPOINTS

THE REAL SCALE

Unlocking border trade.

Connecting communities.

Creating shared prosperity.

KAMBA-NIGER ROUTE

7 CHECKPOINTS

- 1 Kamba Border Post
- 2 Dounia Checkpoint
- 3 Falangoun Crossing
- 4 Birni Outpost
- 5 Tondiki Point
- 6 Madaoua Gate
- 7 Niger Border Post

No digital storefront

No structured payment

Multiple checkpoints along routes

Poor road conditions

No data collection system

Poor coordination guarantor

The Real Challenges

Challenge	Severity	Justification
	Critical	A seller with large stock is only known to local buyers. A buyer in another country cannot see available goods.
	Critical	Some buyers use unofficial payment methods that have led to losses for sellers.
	Critical	Along short distances, many checkpoints exist. Each adds time and unofficial payments.
	High	Poor roads have extended travel times significantly, increasing fuel costs.
	High	Government agencies lack accurate trade data, making policy planning difficult.
	High	New buyers face trust issues. Sellers ask who guarantees payment. No clear answer.
	Medium	Multiple government agencies operate at same borders but do not share information efficiently.

THE REAL CHALLENGES

Unlocking
border trade.

Connecting
communities.
Creating shared
prosperity.

The Hidden Assets

Hidden Asset

Project Opportunity

Justification

Trade associations already organized

Onboard associations,
not individual traders

Large trade associations exist and their
leadership wants solutions to ongoing challenges.

Government digital centres exist

Integrate platform with existing
government digital infrastructure

Some border centres have servers and staff
willing to collaborate.

Existing project already trusted

Use that project as a
trust anchor

Local traders have stated they would trust a
digital solution endorsed by a long-standing project.

Loading points have defined roles

Digitize each role and turn them
into digital agents

Loading points already have loaders,
weighers, and park managers who collect small fees.
They can become agents.

Multiple training centres exist

Physical locations for learning
and onboarding

Some training centres are underused and
have basic furniture and space.

Simplified trade pilot active

Platform becomes the digital
backbone for the simplified
trade system

A simplified trade system for small traders
exists but lacks a digital component.

BORDER INFRASTRUCTURE

Facilities and
infrastructure
already in place.

EXISTING TRUST

Communities and
projects already
trusted by traders.

READY TO SCALE

Multiple assets
that can be
activated now.

DIGITAL FUTURE

Building a connected
platform for seamless
border trade.

THE HIDDEN ASSETS

1 ONBOARD TRADERS

Register name, product, phone, identity

2 INPUT TRANSACTIONS

Enter sale details into the digital marketplace

3 VERIFY IDENTITY

Take photo of trader and goods

4 RECEIVE ESCROW PAYMENT

Platform pays agent mobile money, agent gives trader cash

5 EARN COMMISSION

Small percentage of each transaction

KAMBA-NIGER ROUTE

- 7 Niger Border Post

Digital Trade Agent Network		
What Agent Does	How	Justification
 Onboard traders	Register name, product, phone, identity	Many traders do not use smartphones. An agent can register them using basic phone numbers.
 Input transactions	Enter sale details into the digital marketplace	A buyer in another country can see what is available. The agent posts it.
 Verify identity	Take photo of trader and goods	Disputes can happen. Photo evidence helps resolve them fairly.
 Receive escrow payment	Platform pays agent mobile money, agent gives trader cash	The trader receives cash immediately without needing a bank account.
 Earn commission	Small percentage of each transaction	In field tests, agents have earned meaningful supplemental income.

BROKEN ROAD

NO GUARANTOR

CONFUSED OFFICIALS

WAWUAfrica DIGITAL TRADE AGENT NETWORK

Escrow and Mobile Money Bridge

Problem	Solution	Justification
 Different currencies used across borders	Platform accepts one currency, converts, pays in the other currency	Unofficial conversion rates can be high. A transparent system benefits traders.
 No trust between strangers	Escrow holds money until delivery is confirmed	Some buyers have claimed non-receipt after goods arrived. Escrow prevents this.
 Trader has no bank account	Pay via mobile money services	Mobile money has millions of users across the region. Most traders already use it.
 Difficulty moving money across borders	Platform handles conversion digitally	No need to carry cash across borders, reducing risks.

SECURE

Escrow protects buyers and sellers

FAST

Mobile money payments are quick and convenient

INCLUSIVE

Accessible to all traders across the region

ESCROW + MOBILE MONEY BRIDGE

Transport Union Integration

Current Problem	Solution	Justification
 Trucks sometimes leave borders empty	Digital dispatch system provides guaranteed loads	Some transport unions have many idle trucks on certain days.
 Drivers carry cash and face security risks	Digital payment to union account, then to driver	There have been incidents of cash theft on the road.
 No formal record of trips	Platform app logs each trip	Unions can use trip records to show banks their activity and access credit.
 Platform takes a small coordination fee	Union keeps the majority but gets digital records	Union representatives have said a small fee is acceptable if loads are consistent.

STRONGER UNIONS. SAFER DRIVERS. MORE LOADS. BETTER FUTURE.

MORE LOADS
Less idle time,
more income.

SAFER DRIVERS
Digital payments
reduce risks.

DIGITAL RECORDS
Stronger proof,
better access to credit.

UNION GROWTH
More trust,
more opportunities.

TRANSPORT UNION INTEGRATION

Data Monetization

Data Product	Who Will Pay	Justification
 Anonymized transaction data	 Government trade agencies, development partners	Government agencies have explicitly requested trade data for policy planning. Budgets exist for this.
 Market intelligence report	 Private exporters and importers	A private company would pay to understand volumes of specific goods entering through specific corridors.
 Trader credit profiles	 Microfinance banks	Microfinance banks want to lend to informal traders but lack transaction history.
 Real-time border dashboards	 Government agencies	Government wants real-time trade volume visibility for forecasting and planning.

DATA MONETIZATION

Trade Credit Score

Step		How It Works	Justification	
1		Trader uses escrow consistently over time	Every transaction is recorded: amount, date, product, buyer location	A consistent record builds trust.
2		Platform generates a credit score	Based on consistency, volume, and dispute history	The score reflects real trading behaviour.
3		Partner microfinance bank offers a loan	Bank sees the score and lends without traditional collateral	Banks want low-risk customers.
4		Loan repaid through future escrow proceeds	Automatic deduction from incoming payments	The trader never misses a payment.
5		Platform earns a referral fee or interest spread	Bank pays the platform for bringing a verified customer	A sustainable revenue stream that does not burden the trader.

- KEY BENEFITS**
- ✓ Builds credit without collateral
 - ⌚ Faster loan approval
 - 📈 Encourages consistent trading
 - 👥 Stronger trust for all parties
 - 🌱 Sustainable growth for traders

TRADE CREDIT SCORE

ZONE COORDINATOR

- ✓ Oversee multiple loading points
- ✓ Train agents
- ✓ Report to project

DIGITAL AGENT

- ✓ Onboard traders
- ✓ Input transactions
- ✓ Verify delivery
- ✓ Resolve disputes

MOBILE MONEY AGENT

- ✓ Handle cash-in and cash-out
- ✓ Serve traders without mobile money accounts

Digital Agent Framework

Role	Responsibilities	Compensation Type	Number Needed	Justification
 Zone Coordinator	Oversee multiple loading points, train agents, report to project	Salary plus bonus	One per zone	Each geographical zone needs local leadership.
 Digital Agent	Onboard traders, input transactions, verify delivery, resolve disputes	Base stipend plus commission	200	One agent can handle many traders. Commission incentivizes performance.
 Mobile Money Agent	Handle cash-in and cash-out for traders without mobile money accounts	Transaction fee	50	Some older traders prefer cash at major markets.

DIGITAL AGENT FRAMEWORK

Escrow and Multi-Currency Process

Escrow and Multi-Currency Process		
Step	Action	Justification
1 	Buyer deposits funds into platform mobile money account	The deposit takes only a few minutes.
2 	Platform confirms deposit and notifies seller	Seller receives confirmation that funds are held.
3 	Agent verifies goods quality and takes photo	Visual evidence prevents disputes.
4 	Transport union driver picks up with dispatch code	The driver has a unique code for the load.
5 	Buyer confirms delivery by simple message	A basic SMS confirmation is enough.
6 	Platform converts currency if needed at transparent rate	The exchange rate is published and clear.
7 	Platform pays seller in preferred currency	Money arrives within one hour of confirmation.
8 	Platform deducts clearly stated fees	The trader sees a full breakdown.

ESCROW AND MULTI-CURRENCY PROCESS

Transport Union Active Corridors

Corridor	Transport Union	Project Action	Justification	
 Saki area to Benin	Local transport employers association	Sign digital dispatch agreement	Union leadership has expressed willingness to collaborate.	
 Kamba area to Niger border	Kebbi transport unions	Provide tablets to dispatchers	Dispatchers currently use manual notebooks. Digital tools increase efficiency.	
 Idiroko area to Benin	Ogun state transport union	Same model	Many trucks are idle multiple days per week.	
 Oron area to Cameroon	Akwa Ibom transport union	Same model	Cross-border trade in certain goods is significant, and trucks return empty.	

TRANSPORT UNION ACTIVE CORRIDORS

Geographic Rollout					
Phase	Zone	Loading Points	Estimated Traders	Timeline	Justification
1 Phase 1	South-West	Multiple markets	Several thousand	Months 1-3	Existing project office in the zone has basic infrastructure.
2 Phase 2	North-West	Multiple markets	Several thousand	Months 4-6	High trading activity due to current market conditions.
3 Phase 3	South-South	Multiple markets	Several thousand	Months 7-8	Growing trade in fish and plantain to neighbouring countries.
4 Phase 4	North-East	Multiple markets	Several thousand	Months 9-10	Security improvements have allowed traders to return.
5 Phase 5	North-Central	Multiple markets	More than a thousand	Month 11	Strategic for yam and cassava trade.
6 Phase 6	South-East	Multiple markets	More than a thousand	Month 12	Manufacturers need raw materials from neighbouring countries.

GEOGRAPHIC ROLLOUT

KNOWLEDGE

DIGITAL AGENT

ONLINE COURSE

PRICING INTELLIGENCE

RECORDS & ACCESS TO FINANCE

Agent handles technology.
Trader focuses on trade.

Learn. Understand.
Trade with confidence.

See prices across
all corridors.

Build records.
Access loans. Grow.

Knowledge Gaps and Solutions

Gap	Solution	Justification
 Low digital literacy	Digital agents handle technology. Trader only speaks to agent.	Many traders cannot read. An agent does all digital work.
 Limited export compliance knowledge	Short online course on cross-border compliance	Some traders have lost goods due to missing documents.
 No pricing intelligence	Platform shows real-time prices across all corridors	A trader can see current prices in neighbouring markets before selling.
 No formal record keeping	Platform automatically generates transaction history	A trader can show months of records to apply for a loan.

KNOWLEDGE GAPS AND SOLUTIONS

Building Trust. Enabling Trade.

Strong solutions.
Stronger communities.

- ✓ Verified people
- ✓ Secure transactions
- ✓ Safe deliveries

Trusted People

Secure Process

Reliable Trade

Stronger Together

Trust Issues and Solutions

Payment default

Solution
Escrow. No release until buyer confirms receipt.

Justification
Some buyers have confirmed non-receipt incorrectly. Escrow prevents this.

Product quality concerns

Solution
Agent verifies before dispatch. Photo evidence stored.

Justification
The buyer sees actual product photos before dispatch.

Counterfeit goods

Solution
Seller verified through existing project registration

Justification
Only registered and verified sellers can list goods.

Theft during logistics

Solution
Transport unions police their own members

Justification
If a driver steals, the union can blacklist them from all work.
